A budding frontend developer with extensive skill-set in MERN-Stack web development. My expertise combines robust technical know-how with a sharp design sense, allowing me to develop web applications that are both highly functional and aesthetically pleasing. I thrive on tackling complex problems with innovative solutions and continuously seek new opportunities to advance the frontiers of web development. I am eager to join a team where I can contribute to impactfull projects and continue to hone my skills as a frontend developer.

SKILLS

- HTML
- CSS
- JavaScript
- Bootstrap
- Tailwind CSS
- RESTful API
- React.js
- VITE
- Next.js
- Node.js
- MongoDB
- GIT

EXPERIENCE

MERN Full Stack Developer Intern │ Luminar Technolab (Aug 2023 – Apr 2024)

- Developed and maintained responsive web applications.
- Familiar with backend technologies and frameworks.
- Worked closely with other developers to optimise the scalability of applications.
- Contributed to creation of user-friendly interfaces and interactive components.

PROJECTS

- E-Commerce web application, which allows users to add various products to their cart as well as, it enables admins to add or remove products and users.
- An Employee Data Management System by using MERN Stack technologies which styled with bootstrap. Implemented CRUD operations for seamless data management using MongoDB.
- A media player web application with seamless integration of new videos, playback controls and the ability to create personalised favourite categories and watch history.

EDUCATION

Master's in Computer Engineering from **Warsaw Management University**   (Present)

Master's in Electronics Science from **Kurukshetra University**   (2016 – 2018)

- Syllabus includes Computer Science as an open elective subject which covers programming in C and basics of HTML and CSS.
